                                         antibody, its fragment, recombinant or conjugate derivatives, immunoglobulin molecule and biotinylated derivatives are useful for a diagnostic means for detecting, or preparing a medicament for treating, diseases expressing tenascin, e.g. tumor such as gliomas, mammary, cystic brain tumours, lung carcinomas, fibrosarcomas, and squamous cell carcinomas. The diagnostic means is used in in vivo imaging techniques. The medicament is in the form of a kit suitable for carrying out the three-step pre-targeting method. The antibody, in combination with a second tenascin-specific antibody are useful in sandwich assay for detecting the level of circulating tenascin. The present sequence represents the ST2146 MAb heavy chain variable region sequence
                                                                                                                                                                                                                                                                                                                                                      antibody (MAb) whose light and heavy chain variable region sequences their proteolytic fragments that bind to an antigenic epitope within EGF (epidermal growth factor)-like repeat of human tenasoin C. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
encodes a fusion protein comprising a chimerised antibody molecule, and a cumour necrosis factor (TNF) molecule or its fragment. The antibody specifically binds to a target. The fragment of the TNF molecule of specifically binds to a target. The fragment of the TNF molecule cossesses the cell killing properties of a full-length TNF molecule. Also described: (1) a chimeric fusion protein (1) encoded by the isolated nucleic acid molecule; (2) an expression vector comprising the isolated nucleic acid molecule operably linked to a promoter; and (3) a recombinant cell comprising the isolated nucleic acid molecule or the expression vector. (1) has antiinflammatory, antirheumatic, antibacterial, immunosuppressive, nephrotropic and antiarteriosclerotic activities. The nucleic acid is useful for the expression of proteins, especially antibodies, as well as fusion proteins that incorporate the antibody and a protein. The expression vector is useful in manufacturing a recombinant antibody (e.g. a fully human, humanized or chimeric antibody) in a eukaryotic cell. The antibody is useful in therapy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody; chimeric fusion protein; antiinflammatory; antirheumatic; antiarthritic; antipsoriatic; antiastimatic; neuroprotective; virucide; antibacterial; immunosuppressive; nephrotropic; antiarteriosclerotic; rheumatoid arthritis; inflammatory condition; psoriasis; asthma; inflammatory bowel disease; multiple sclerosis; viral pneumonia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              particularly for targeting G250 and blocking granulocyte-macrophage stimulating factor (GM-CSF), which is involved in the development of rheumatoid arthritis. The antibody is useful for treating inflammatory conditions, e.g. psoriasis, asthma, inflammatory bowel disease, multiple sclerosis, viral or bacterial pneumonia, septic shock, nephritis, or arteriosclerosis. The present sequence represente mouse 19/2 antibody heavy chain variable region, which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13-FEB-2002; 2002US-0355838P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   77
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0
```

a defined 6629 bp sequence concatenated to the amino acid secencoded by nucleotides 1839-2825 of the 6629bp sequence. The antibodies have antiinflammatory, antiarthritic, and antirhed granulocyte macrophage colony stimulating factor (GM-CSF) specific antibody light chain or heavy chain. The invention further relates to chimerised granulocyte macrophage colony stimulating factor (GM-CSF) specific antibody light chain encoded by nucleotides 1357-1752 of a defined sequence of 6159 by concatenated to the amino acid sequence encoded by nucleotides 1366-2203 of the 6159by sequence; or a chimeric GM-CSF specific antibody heavy chain encoded by nucleotides 1357-1764 useful for rheumatoid Nucleic acids encoding chimeric granulocyte macrophage colony stimulating factor (GM-CSF) specific antibodies comprising a light and a heavy chain, useful for blocking effects of GM-CSF on cells, e.g. in preventing The invention relates to an isolated nucleic acid encoding Example <u>ب</u> SEQ ID NO 28; 81pp; English.

The invention relates to methods for producing catalytic antibodies displayed on a phage. The method comprises: (a) generating a gene library of antibody-derived domains; (b) inserting coding for the domains into a phage expression vector; and (c) isolating the catalytic antibodies. The phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The catalytic antibodies can be isolated by preparing an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antigen; optionally immunising an animal with the antigen; generating a library of VH and VL domains from the immunised animal; cloning the VH and VL domains into a phage expression vector to generate phage display antibodies; selecting phage display antibodies which bind specifically the antigen; screening the selected phage display antibodies for catalytic activity to substrate; and isolating the catalytic antibodies, where the phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The processes are used to produce catalytic antibodies, which can be used for in vivo activation of a prodrug. The present sequence represents a genetic sequence of heavy chain pattern A from mouse derived RT3 phage antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WO9840488-A1.

D12 VH and VL (see AAW84094) show sequence similarity to Kabat VH subgroup I (see CA AW84095) and Kabat VK subgroup III (see AAW84095) were constructed by CC combining the framework regions of the human V region consensus sequences CC with complementarity determining regions of D12 (keeping some preferred CC murine framework residues). The humanised antibodies are specifically reactive with the human alpha-v beta-3 protein receptor and capable of CC neutralising the receptor. They can be used for passive immunotherapy of CC adisorder mediated by the alpha-v beta-3 receptor, e.g. cardiovascular CC disorders or angiogenic-related disorders, such as angiogenesis CC associated with diabetic retinopathy, atherosclerosis and restenosis, CC chronic inflammatory disorders, macular degeneration, rheumatoid CC arthritis and cancer, e.g. solid tumour metastasis, and diseases where CC observations produced by bone metastasis, bone loss due to combilisation or sex hormone deficiency. They can also be used for tracetal distantion or sex hormone deficiency. They can also be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The present invention describes a polypeptide sequence comprising part or CC all of the primary structural conformation of one or more thyrotropin CC (TSH) receptor epitopes with which autoantibodies and/or lymphocytes CC produced in response to a TSH receptor interact. Also described: (1) one CC lymphocytes interact, as with the polypeptide sequence described above; CC lymphocytes interact, as with the polypeptide sequence described above; CC (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a CC subject suspected of suffering from, susceptible to, having or recovering from autoimmune disease associated with an immune reaction to a TSH ceeptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner CC and/or tissue containing a TSH receptor, for simulating thyroid tissue, separate or CC sequential use in stimulating thyroid tissue, and/or tissue containing a TSH receptor. The specific binding partner is CC useful for the manufacture of a medicament for stimulating thyroid tissue containing a TSH receptor. The specific binding partner is CC useful for the manufacture of a medicament for stimulating thyroid tissue or themsure containing a TSH receptor, and for treating thyroid cancer. CC ACC4874 to ACC44905 and ABP96719 to ABP96750 represent TSH receptor antibody VH cand containing a TSH receptor, and for treating thyroid cancer. CC and VI domains given in ABP96751 to ABP96778, which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide sequence having part or all of the primary structural conformation of one or more TSH receptor epitopes, useful for treating a autoimmune disease associated with an immune reaction to a TSH receptor, e.g. thyroid cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 71; Fig 17; 196pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             treating an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a polypeptide sequence comprising part or CC all of the primary structural conformation of one or more thyrotropin (TSH) receptor epitopes with which autoantibodies and/or lymphocytes (I) one produced in response to a TSH receptor interact. Also described: (I) one CC lymphocytes interact, as with the polypeptide sequence described above; CC (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a CC subject suspected of suffering from, susceptible to, having or recovering from autoimmune disease associated with an immune reaction to a TSH receptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH receptor, which is capable of binding partner does not comprise TSH receptor, where the containing a TSH receptor, for simulating thyroid tissue, and/or tissue containing a TSH receptor, for simulating thyroid tissue, separate or sequential use in stimulating thyroid tissue, and/or tissue containing a TSH receptor. A TSH receptor has cytostatic activity and can be used in immune reaction to a TSH receptor. The specific binding partner is capable for the manufacture of a medicament for stimulating thyroid tissue containing a TSH receptor. The specific binding partner is capable of a medicament for stimulating thyroid cancer. CC acceptation and ACC44915 and ABP96719 to ABP96750 represent TSH receptor and CC and VI domains given in ABP96711 to ABP96778, which are used in the capable of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The present invention describes a polypeptide sequence comprising part or all of the primary structural conformation of one or more thyrotropin (TSH) receptor epitopes with which autoantibodies and/or lymphocytes (TSH) receptor interact. Also described: (1) one or more receptor TSH epitopes with which the autoantibodies and/or (2) ymphocytes interact, as with the polypeptide sequence described: (1) one or more receptor TSH epitopes with which the autoantibodies and/or (2) an enthod of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a complete suspected of suffering from, susceptible to, having or recovering from autoimmune disease associated with an immune reaction to a TSH receptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner candor tissue or tissue containing a TSH receptor, for simulating thyroid tissue, and/or tissue containing a TSH receptor for simulating thyroid tissue, and/or tissue containing a TSH receptor has cytostatic activity and can be used in comprise the produced in immune reaction to a TSH receptor. The specific binding partner is cuseful for the manufacture of a medicament for stimulating thyroid tissue containing a TSH receptor. The specific binding partner is cuseful for the manufacture of a medicament for stimulating thyroid tissue containing a TSH receptor, and for treating thyroid cancer. CC ACC44874 to ACC44915 and ABP96751 to ABP96750 represent TSH receptor antibody VH and CC and VI domains given in ABP96751 to ABP96778, which are used in the
                                    exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polypeptide sequence having part or all of the primary structural conformation of one or more TSH receptor epitopes, useful for treating an autoimmune disease associated with an immune reaction to a TSH receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 71; Fig 21; 196pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    e.g. thyroid cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-AUG-2001; 2001GB-00020649

The present invention describes a polypeptide sequence comprising part or CC all of the primary structural conformation of one or more thyrotropin CC (TSH) receptor epitopes with which autoantibodies and/or lymphocytes or more response to a TSH receptor interact. Also described: (1) one CC produced in response to a TSH receptor interact. Also described: (1) one CC lymphocytes interact, as with the polypeptide sequence described above; (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a subject suspected of suffering from, susceptible to, having or recovering from autoimmune disease associated with an immune reaction to a TSH receptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner curvaind one or more further agents capable of stimulating thyroid tissue, and/or tissue containing a TSH receptor, for simultaneous, separate or CC and/or tissue containing a TSH receptor. A TSH receptor has cytostatic activity and can be used in gene therapy. The polypeptide, compositions and methods from the present cuseful for the manufacture of a medicament for stimulating thyroid tissue or tissue containing a TSH receptor, and for treating partner is cuseful for the manufacture of a medicament for stimulating thyroid cancer. CC ACC44974 to ACC44910 to ACC44931 and ACC44931 en ACC44933 encode the TSH receptor antibody VH and VL domains given in ABP96751 to ABP96778, which are used in the cemplatication of the present invention
                                                                                                                                                                                  Query Match

Also described:
(1) a recombinant nucleic acid comprising at least one sequence selected
from the group consisting of ADC79233, ADC79235, ADC79235, ADC79236,
ADC79237 and ADC79238; (2) a vector comprising the recombinant nucleic
acid; (3) a host cell; (4) a pharmaceutical composition; (5) preventing
or treating CA 125 tumour antigen-associated disease in a mammal; and (6)
negatively modulating a CA 125 tumour antigen in a mammalian cell. A
modulator capable of negatively modulating a CA 125 tumour antigen has
cytostatic activity, and can be used in gene therapy. The modulator
recombinant nucleic acid, vector or host cell can be used for preparing a
composition for preventing or treating CA 125 tumour antigen-associated
disease in a mammal. The present sequence is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CA 125
CA 125
                                                                                                                                                                                                                                                                                                                                                       Sequence 239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New modulator capable of negatively modulating a CA 125 tumor antigen in a mammalian cell, useful for preparing a composition for preventing or treating CA 125 tumor antigen-associated disease in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-MAR-2002; 2002US-0363306P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an antibody (1) that competitively inhibits binding of TMEEFF2#19 to TMEEFF2. Also described: (1) a paramaceutical composition comprising the antibody and a carrier; (2) detecting a prostate cancer cell in a biological sample from a patient by contacting the biological sample with the antibody; (3) inhibiting proliferation of a prostate cancer-associated cell by contacting the cell with the antibody; and (4) treating prostate cancer with an antibody to TMEEFF2. (1) has cytostatic activity and can be used in vaccines. The antibody, composition and method are useful for treating prostate cancer, e.g. primary prostate cancer, metastatic prostate cancer, locally advanced prostate cancer, androgen independent prostate cancer, prostate cancer that has been treated with neoadjuvant therapy, or prostate cancer that is refractory to treatment with neoadjuvant therapy. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The present invention describes a polypeptide sequence comprising part or all of the primary structural conformation of one or more thyrotropin (TSH) receptor epitopes with which autoantibodies and/or lymphocytes co produced in response to a TSH receptor interact. Also described: (1) one CC lymphocytes interact, as with the polypeptide sequence described above, CC (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a cc subject suspected of suffering from, susceptible to, having or recovering from subject suspected of suffering from, susceptible to, having or recovering receptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner agents capable of stimulating thyroid tissue, and/or tissue containing a TSH receptor, for simultaneous, separate or sequential use in stimulating thyroid tissue, and/or tissue containing a TSH receptor. The specific binding partner is useful for the manufacture of a medicament for stimulating thyroid tissue containing a TSH receptor. The specific binding partner is useful for the manufacture of a medicament for stimulating thyroid tissue or invention can be used for treating an autoimmune disease associated with a immune reaction to a TSH receptor. The specific binding partner is useful for the manufacture of a medicament for stimulating thyroid tissue or invention and ACC44915 and ABP96719 to ABP967070 represent TSH receptor antibody VH candulfication of the present invention
                                    exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide sequence having part or all of the primary structural conformation of one or more TSH receptor epitopes, useful for treating an autoimmune disease associated with an immune reaction to a TSH receptor, e.g. thyroid cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 67; Fig 14; 196pp; English.

RESULT 15
ABP96755
The present invention describes a polypeptide sequence comprising part or CC all of the primary structural conformation of one or more thyrotropin CC (TSH) receptor epitopes with which autoantibodies and/or lymphocytes CC produced in response to a TSH receptor interact. Also described: (1) one CC lymphocytes interact, as with the polypeptide sequence described above; CC lymphocytes interact, as with the polypeptide sequence described above; CC (2) a method of screening for autoantibodies or lymphocytes produced in response to a TSH receptor in a sample of body fluid obtained from a CC subject suspected of suffering from, susceptible to, having or recovering from autoimnune disease associated with an immune reaction to a TSH receptor; (3) a binding partner for a TSH receptor, which is capable of binding partner does not comprise TSH or naturally produced antibodies to the TSH receptor; and (4) a combination comprising the binding partner CC and/or tissue containing a TSH receptor, for simultaneous, separate or sequential use in stimulating thyroid tissue, and/or tissue containing a TSH receptor. A receptor has specific binding partner in the used for treating an autoimmune disease associated with an immune reaction to a TSH receptor. The specific binding partner is cuseful for the manufacture of a medicament for stimulating thyroid tissue or tissue containing a TSH receptor, and for treating thyroid cancer. CC ACC44974 to ACC44930 to ACC44931 en and partner and for treating thyroid tissue or tissue containing a TSH receptor, and for treating thyroid cancer. CC and Accadas and Accadas and Accadas endicament for stimulating thyroid tissue or tissue containing a TSH receptor, and for treating thyroid cancer. CC and Accadas and Accadas endicament for stimulating thyroid tissue or tissue containing a TSH receptor, and for treating thyroid cancer. CC and Accadas endicament for stimulating thyroid cancer. CC and Accadas endicament for stimulating thyroid cancer. CC and Accadas endicament for the TSH receptor antibody W
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide sequence having part or all of the primary structural conformation of one or more TSH receptor epitopes, useful for treating an autoimmune disease associated with an immune reaction to a TSH receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB; ACC44910.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Smith BR, Furmaniak J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              23-AUG-2001; 2001GB-00020649.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 No.
          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB DB

Mamino acid sequence of homogeneous antibodies to
rearrangements in heavy chain V-region gene segmer
Nature 283:35-40(1980).

-!- MISCELLANEOUS: The sequences of 10 hybridoma r
bind dextran differ from that shown at 1-7 pot
which occur in the D and J segments.

-!- MISCELLANEOUS: This protein binds dextran.

-!- SIMILARITY: Contains 1 immunoglobulin-like dor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
